Kharif Harvest Outlook: Strong prices expected for most crops, except Bajra and Moong

The mandi prices of Bajra, Paddy, Moong, Groundnut and Soyabean are ruling in negative ranging from 0.6 per cent to 31 per cent over their next season's MSPs

As new Kharif crops arrive in mandis in about 10 days, farmers in top-producing states are expected to receive favourable market prices. The only notable concerns are Bajra (Pear Millet) and Moong (Green Gram), which are lagging behind at 31 per cent and 13 per cent below their MSPs.

Nine out of 14 Kharif crops in which MSPs are announced, including Maize, Jowar, Tur, Urad and Soyabean, were sold on average either at par with their respective MSPs (of 2026-27 season) or higher on September 4, according to Agmarknet data.

In case of paddy, the key Kharif crop in which market rates are influenced by government procurement, currently the average price in Uttar Pradesh was ₹1,965/quintal, the data show.
